Centralia College feels that it is important to ensure that we are offering our students the highest quality educational experiences available. For this reason we maintain an advisory committee of industry professionals who are invested in the local community and who are experts in the electronics industry. This advisory committee helps to guide the college when changes in the curriculum become necessary as the electronics industry makes advances in technology or as industry demands change. The goal of the ERA program is for students to be as prepared as possible for real-world applications as they enter the Electronics, Robotics & Automation workforce. We make a point of including current and past students in the advisory process in an effort to more fully meet their needs.

Listed below are the current Advisory Committee Members

We make a point of including current and past students on our advisory committee in an effort to give students a voice in the decision making process.
